Statistics of utility-scale power generation in South Africa in 2021

CSIR Energy Centre
v1.0

Apr 2022

Warrick PIERCE
Bianca FERREIRA
Summary of 2021 statistics:
Coal still dominates and provides about 80% of electricity generated, record high diesel usage, and renewables (excluding hydro) accounted for 6.7%

By 2021 South Africa had 53.7 GW of wholesale/public nominal capacity
- Coal is 39.3 GW (increased)
- Nuclear is 1.9 GW (unchanged)
- Diesel (OCGT) is 3.4 GW (unchanged)
- Hydro is 0.6 GW hydro and pumped storage is 2.7 GW (unchanged)
- Wind is 3.0 GW (increased)
- Solar PV is 2.2 GW (increased)
- CSP is 0.5 GW (unchanged)
- 1 361 MW of coal, 528 MW of wind and 180 MW of utility-scale solar PV became operational in 2021

The electricity mix is still dominated by coal-fired power generation which contributed over 80% to system demand in 2021
- Coal energy contributed 81.4% (184.7 TWh)
- Nuclear energy contributed 5.4% (12.2 TWh)
- Renewable energy contributed 11.9% (27.0 TWh)
- Renewable energy contributed 6.7% (15.2 TWh) - excluding hydro
- The remaining 1.4% came from diesel (3.2 TWh)

NOTES: Nominal capacities reported as on 31 Dec 2021; Electricity mix given for 1 Jan 2021 – 31 Dec 2021; RSA = Republic of South Africa; OCGT – Open-Cycle Gas Turbine; CSP – Concentrating Solar Power; Excludes Embedded Generation (EG) and Distributed Generation (DG); Sources: CSIR Analysis; Eskom
Summary of 2021 statistics:
System demand recovered notably in 2021 but not yet to 2019 levels

In 2021, system demand increased by 6.5 TWh (3.0%) relative to 2020 but was still 5.3 TWh (-2.3%) less than that experienced in 2019

- Peak system demand was 35.0 GW (vs 34.1 GW the year before)
- All technologies (coal, nuclear, diesel and renewables) generated more electricity than the year before. The most notable relative increase was local hydro with more than double the output

In 2021, the VRE fleet of 5.7 GW (wind, solar PV, CSP) reduced peak demand slightly but more importantly high demand hours by ~70.5%

- VRE fleet reduced peak demand by ~0.96 GW
- VRE fleet also reduced high-demand hours (hours with >30 GW system demand) from 699 hours to 206 hours (~493 hours less, -70.5%)

Flexibility needs are not yet significantly increased with the existing VRE fleet in 2021

- Minimum system demand was 18.4 GW whilst residual demand minimum was 17.1 GW (relative to a minimum system demand of 14.9 GW and residual demand of 13.8 GW the year before due to reduced economic activity during extreme lockdown conditions)
- System demand & residual demand was above 20.5 GW and 19.5 GW, respectively for 90% of the year

NOTES: Residual demand = System demand less variable renewable energy (solar PV, CSP and wind); VRE = Variable Renewable Energy; Excludes Embedded Generation (EG) and Distributed Generation (DG); H2 stats for 1 Jan 2021 – 31 December 2021; H1 stats for 1 Jan 2021 – 30 Jun 2021
Sources: CSIR Analysis; Eskom
Summary of 2021 statistics:
2021 saw 1 169 hours of loadshedding (upper limit was 2 521 GWh) whilst actually achieved was 1 775 GWh

In 2021, loadshedding occurred for 1 169 hours (~13% of the time) with an upper limit of 2 521 GWh relative to actual energy shed of 1 775 GWh

- Intensive loadshedding has been experienced in 2021 (40% increase compared to 2020 loadshedding upper limit)
- Loadshedding dominated by Stage 2 type loadshedding
- Loadshedding occurred for 13% of the hours in 2021

Eskom fleet EAF declining trend continues and drove loadshedding events in 2021 with specific concerns surrounding UCLF (unplanned) trends

- Eskom fleet average EAF of 61.8% for 2021 (relative to 2020 of 65%, 2019 of 66.9% and 2018 of 71.9%)
- EAF planned maintenance at 10.8% (PCLF), unplanned outages at 24.6% (UCLF) & other outages at 2.9% (OCLF)
- The best hourly EAF was 74.2% and worst was 51.0%, respectively achieved on 5 Aug 2021 and 28 Dec 2021

NOTES: EAF - Energy Availability Factor; PCLF - Planned capability Loss Factor; Excludes Embedded Generation (EG) and Distributed Generation (DG); Statistics calculated for 1 Jan 2021 – 31 Dec 2021; UCLF – Unplanned Capability Loss Factor; OCLF – Other Capability Loss Factor; EAF = 100%-PCLF-UCLF-OCLF

5. Hourly electricity production (2021)
6. Actual load shedding (2021)
7. Other power system statistics
Agenda

1. Overview actual electricity production (2021)
2. Monthly electricity production (2021)
3. Weekly electricity production (2021)
4. Daily electricity production (2021)
5. Hourly electricity production (2021)
6. Actual load shedding (2021)
7. Other power system statistics
Equivalent wholesale South African electricity production and demand as measured & published by Eskom

1. Eskom\(^1\) (Gx)
   - Production
2. IPPs\(^1\) (Gx)
3. Imports
4. Exports
5. Eskom\(^1\) (Tx\(^2\))
6. Munics. (Dx\(^2\))
7. Large customers (Com/Ind/Min)

EG = Embedded Generation; DG = Distributed Generation; Gx = Generation; Tx = Transmission; Dx = Distribution; DSR = Demand Side Response; MLR = Manual Load Reduction; ILS = Interruptible Load Supply; IOS = Interruption of Supply.

1 Power generated less power station load (auxillaries); Minus pumping load (Eskom owned pumped storage); 2 Transmission/distribution networks incur losses before delivery to customers.
From Jan-Dec 2021, 227 TWh of net electricity was produced in SA

Actuals captured in wholesale market for the period Jan-Dec 2021 (i.e. without self-consumption of embedded plants)

<table>

</table>

**Notes:** Pumping load excluded. Wind generation includes Eskom’s 100 MW Sere wind farm.
Demand Side Response (DSR) = Manual Load Reduction (MLR) + Interruptible Load Supply (ILS) + Interruption of Supply (IOS)
Sources: Eskom; CSIR Energy Centre analysis.
Monthly electricity production of SA’s wind, solar PV & CSP fleet
Actual monthly production from wind, solar PV and CSP plants in South Africa from Jan-Dec 2021

Monthly electricity production
[GWh]

Notes: Wind generation includes Eskom’s 100 MW Sere wind farm. CSP energy only measured from date when more than two CSP plants were commissioned. Wind and solar PV energy excludes curtailment and is thus lower than actual wind and solar PV generation.
Sources: Eskom; CSIR Energy Centre analysis
Agenda

1. Overview actual electricity production (2021)
2. Monthly electricity production (2021)
3. Weekly electricity production (2021)
4. Daily electricity production (2021)
5. Hourly electricity production (2021)
6. Actual load shedding (2021)
7. Other power system statistics
Weekly electricity production for all power supply sources
Actual weekly production: conventional fleet, wind, solar PV & CSP (Jan-Dec 2021)

Note: Pumping load excluded. First week and last week included not full weeks.
Sources: Eskom; CSIR Energy Centre analysis
Weekly electricity production of SA’s wind, solar PV and CSP fleet
Actual weekly production from large-scale solar PV, wind & CSP plants under the REIPPPP from Jan-Dec 2021

- Maximum wind + solar PV + CSP weekly production of 394 GWh in week 48 (21 Nov – 27 Nov)
- Minimum wind + solar PV + CSP weekly production of 210 GWh in week 25 (13 Jun – 19 Jun)

Note: First and last week, not full weeks, included and are thus excluded from min/max statistics.
Sources: Eskom; CSIR Energy Centre analysis
Agenda

1. Overview actual electricity production (2021)
2. Monthly electricity production (2021)
3. Weekly electricity production (2021)
4. Daily electricity production (2021)
5. Hourly electricity production (2021)
6. Actual load shedding (2021)
7. Other power system statistics
Daily electricity production for all power supply sources
Actual daily production: conventional fleet, wind, solar PV & CSP (Jan-Dec 2021)

Note: Wind includes Eskom’s Sere wind plant.
Sources: Eskom; CSIR Energy Centre analysis
Daily electricity production of wind, solar PV & CSP fleet
Actual daily production from large-scale solar PV, wind and CSP plants under the REIPPPP from Jan-Dec 2021

- Maximum daily production of 70 GWh on 17 Dec 2021 (Friday)
- Minimum daily production of 18 GWh on 23 Aug 2021 (Monday)

Capacity operational (31 Dec)
- 2 212 MW
- 3 023 MW
- 500 MW

Supplies Sources
- Solar PV
- Wind
- CSP

Note: Design as per Fraunhofer ISE. Wind includes Eskom’s Sere wind plant.

- Maximum daily relative solar PV contribution of 3.4% on 31 Oct 2021 (Sunday)
- Maximum daily relative wind contribution of 7.1% on 23 Oct 2021 (Saturday)
- Maximum daily relative CSP contribution of 1.3% on 31 Oct 2021 (Sunday)

Note: Total supply includes generation for pumping load

Sources: Eskom; CSIR Energy Centre analysis
Daily solar PV, wind & CSP contribution of 5.9-11.6% in Nov 2021
Actual daily relative solar PV/wind/CSP contribution as a % of total supply in RSA for November 2021

- Maximum daily relative solar PV contribution of 3.2% on 1 Nov 2021 (Monday)
- Maximum daily relative wind contribution of 7.8% on 26 Nov 2021 (Friday)
- Maximum daily relative CSP contribution of 1.3% on 20 Nov 2021 (Saturday)

Note: Total supply includes generation for pumping load
Sources: Eskom; CSIR Energy Centre analysis
Daily solar PV, wind & CSP contribution of 5.3-10.6% in Dec 2021
Actual daily relative solar PV/wind/CSP contribution as a % of total supply in RSA for December 2021

- Maximum daily relative solar PV contribution of 3.4% on 31 Dec 2021 (Friday)
- Maximum daily relative wind contribution of 7.1% on 23 Dec 2021 (Thursday)
- Maximum daily relative CSP contribution of 1.3% on 31 Dec 2021 (Friday)

Note: Total supply includes generation for pumping load
Sources: Eskom; CSIR Energy Centre analysis
Agenda

1. Overview actual electricity production (2021)
2. Monthly electricity production (2021)
3. Weekly electricity production (2021)
4. Daily electricity production (2021)
5. Hourly electricity production (2021)
6. Actual load shedding (2021)
7. Other power system statistics
Diurnal Courses of electricity supply sources in RSA
Actual monthly average diurnal courses of total power supply in RSA Jan 2013-Dec 2015

Note: Design as per Fraunhofer ISE. Pumping load excluded.
Sources: Eskom; CSIR Energy Centre analysis
Diurnal Courses of electricity supply sources in RSA
Actual monthly average diurnal courses of total power supply in RSA Jan 2016-Dec 2018

Note: Design as per Fraunhofer ISE. Pumping load excluded.

Hourly solar PV, wind & CSP contribution of 1.3-13.3% in Jan 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of the total supply in RSA for January 2021

Relative hourly contribution [%]

Day of the month

Supply Sources
- Solar PV
- Wind
- CSP

Capacity operational (end of month)
- 2 157 MW
- 2 495 MW
- 500 MW

Sources: Eskom; CSIR Energy Centre analysis

- Solar PV maximum relative contribution of 7.2% between 12h00 and 13h00 on 17 Jan 2021
- Wind maximum relative contribution of 8.2% between 21h00 and 22h00 on 1 Jan 2021
- CSP maximum relative contribution of 1.9% between 09h00 and 10h00 on 7 Jan 2021
Hourly solar PV, wind & CSP contribution of 0.7-13.9% in Feb 2021

Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for February 2021

- Maximum solar PV relative contribution of 7.3% between 13h00 and 14h00 on 20 Feb 2021
- Maximum wind relative contribution of 6.7% between 17h00 and 18h00 on 15 Feb 2021
- Maximum CSP relative contribution of 2.0% between 15h00 and 16h00 on 7 Feb 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 0.7-13.9% in Mar 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for March 2021

- Maximum solar PV relative contribution of 7.3% between 12h00 and 13h00 on 6 Mar 2021
- Maximum wind relative contribution of 7.1% between 17h00 and 18h00 on 9 Mar 2021
- Maximum CSP relative contribution of 2.0% between 15h00 and 16h00 on 6 Mar 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 0.6-11.4% in Apr 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for April 2021

• Maximum solar PV relative contribution of 7.3% between 13h00 and 14h00 on 3 Apr 2021
• Maximum wind relative contribution of 7.3% between 23h00 and 24h00 on 29 Apr 2021
• Maximum CSP relative contribution of 1.9% between 16h00 and 17h00 on 3 Apr 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 0.9-13.3% in May 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for May 2021

- Maximum solar PV relative contribution of 6.6% between 13h00 and 14h00 on 2 May 2020
- Maximum wind relative contribution of 9.6% between 03h00 and 04h00 on 21 May 2021
- Maximum CSP relative contribution of 1.7% between 16h00 and 17h00 on 1 May 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 0.7-13.5% in Jun 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for June 2021

- Maximum solar PV relative contribution of 5.9% between 13h00 and 14h00 on 27 Jun 2021
- Maximum wind relative contribution of 9.6% between 23h00 and 00h00 on 31 Jun 2021
- Maximum CSP relative contribution of 1.7% between 16h00 and 17h00 on 26 Jun 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 0.3-14.2% in Jul 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for July 2021

- Maximum solar PV relative contribution of 6.1% between 14h00 and 15h00 on 31 Jul 2021
- Maximum wind relative contribution of 10.3% between 01h00 and 02h00 on 1 Jul 2021
- Maximum CSP relative contribution of 1.6% between 16h00 and 17h00 on 2 Jul 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 0.6-14.9% in Aug 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for August 2021

- Maximum solar PV relative contribution of 6.7% between 13h00 and 14h00 on 31 Aug 2021
- Maximum wind relative contribution of 9.7% between 03h00 and 04h00 on 17 Aug 2021
- Maximum CSP relative contribution of 1.7% between 16h00 and 17h00 on 31 Aug 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 0.6-15.3% in Sep 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for September 2021

- Maximum solar PV relative contribution of 7.5% between 12h00 and 13h00 on 26 Sep 2021
- Maximum wind relative contribution of 10.7% between 03h00 and 04h00 on 30 Sep 2021
- Maximum CSP relative contribution of 1.9% between 16h00 and 17h00 on 4 Sep 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 1.1-17.1% in Oct 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for October 2021

- Maximum solar PV relative contribution of 8.2% between 12h00 and 13h00 on 31 Oct 2021
- Maximum wind relative contribution of 8.6% between 03h00 and 04h00 on 23 Oct 2021
- Maximum CSP relative contribution of 2.1% between 15h00 and 16h00 on 31 Oct 2021

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 0.7-19.0% in Nov 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for November 2021

- Maximum solar PV relative contribution of 8.0% between 13h00 and 14h00 on 1 Nov 2021
- Maximum wind relative contribution of 9.7% between 22h00 and 23h00 on 25 Nov 2021
- Maximum CSP relative contribution of 2.0% between 15h00 and 16h00 on 28 Nov 2021

Supply Sources:
- Solar PV
- Wind
- CSP

Sources: Eskom; CSIR Energy Centre analysis
Hourly solar PV, wind & CSP contribution of 1.4-17.5% in Dec 2021
Actual hourly relative solar PV/wind/CSP contribution as a % of total supply in RSA for December 2021

- Maximum solar PV relative contribution of 8.4% between 12h00 and 13h00 on 1 Dec 2021
- Maximum wind relative contribution of 10.0% between 17h00 and 18h00 on 25 Dec 2021
- Maximum CSP relative contribution of 2.1% between 11h00 and 12h00 on 29 Dec 2021

In Oct 2021, wind supply fluctuated day-to-day
Hourly wind production for all 31 days of October 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Nov 2021, wind supply fluctuated day-to-day
Hourly wind production for all 30 days of November 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Dec 2021, wind supply fluctuated day-to-day
Hourly wind production for all 31 days of December 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Jan 2021, CSP storage used in evenings
Hourly CSP production for all 31 days of January 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Feb 2021, CSP storage used in evenings
Hourly CSP production for all 28 days of February 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Mar 2021, CSP storage used in evenings
Hourly CSP production for all 31 days of March 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Apr 2021, CSP storage used in evenings
Hourly CSP production for all 30 days of April 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In May 2021, CSP storage used in evenings
Hourly CSP production for all 31 days of May 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Jun 2021, CSP storage used in evenings
Hourly CSP production for all 30 days of June 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Jul 2021, CSP storage used in evenings
Hourly CSP production for all 31 days of July 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Aug 2021, CSP storage used in evenings
Hourly CSP production for all 31 days of August 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Sep 2021, CSP storage used in evenings
Hourly CSP production for all 30 days of September 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Oct 2021, CSP storage used in evenings
Hourly CSP production for all 31 days of October 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Nov 2021, CSP storage used in evenings
Hourly CSP production for all 30 days of November 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
In Dec 2021, CSP storage used in evenings
Hourly CSP production for all 31 days of December 2021 & average system load diurnal course

Note: System load excludes hydro pumping load (represented as the average for the month)
Sources: Eskom; CSIR Energy Centre analysis
Jan-Dec 2021 system load and residual load duration curves

Notes: Residual Load = System Load - wind - Solar PV - CSP
Sources: Eskom; CSIR Energy Centre analysis
From Jan-Dec 2021 – wind, solar PV & CSP reduced the number of hours with >30 GW total load by 70.5% (~493 less hours)

Wind, solar PV & CSP reduced max. peak demand by ≈1.0 GW

Wind, solar PV & CSP reduced high demand (> 30 GW) from 699 to 206 hours (493 less hrs)

Sources: Eskom; CSIR Energy Centre analysis
VRE contribution continues to be demonstrated - distinct shift of residual demand to lower demand levels as VRE contributes during most demand periods.

Sources: Eskom; CSIR Energy Centre analysis
Unique nature of 2020 demand meant unprecedented low demand levels but for very brief periods of time with similar effect of VRE

Sources: Eskom; CSIR Energy Centre analysis
1-hour gradients did not significantly increase due to collective 5.9 GW of wind, solar PV & CSP

Notes: System and Residual load excludes pumping load for all data points throughout the year
Sources: Eskom; CSIR Energy Centre analysis
Similarly - 3-hour gradients did not significantly increase due to 5.9 GW of wind, solar PV & CSP

Notes: System and Residual load excludes pumping load for all data points throughout the year
Sources: Eskom; CSIR Energy Centre analysis

Agenda

1. Overview actual electricity production (2021)
2. Monthly electricity production (2021)
3. Weekly electricity production (2021)
4. Daily electricity production (2021)
5. Hourly electricity production (2021)
6. Actual load shedding (2021)
7. Other power system statistics
### 2021 overtakes 2020 as the most intensive loadshedding year yet – based on upper limit of loadshedding (as in previous publications)

#### Load shed, upper-limit [GWh]

Actual demand side response (DSR) in 2021 reveals how actual MLR (loadshedding) dominated over other DSR interventions.

Monthly demand side response (DSR) [GWh]

- **January 2021 (Jan-21)**: 166 GWh
  - Manual Load Reduction (MLR) (loadshedding): 11 GWh
  - Interruptible Load Supply (ILS): 114 GWh
  - Interruption of Supply (IOS): 3 GWh
- **February 2021 (Feb-21)**: 126 GWh
  - MLR: 10 GWh
  - ILS: 114 GWh
  - IOS: 2 GWh
- **March 2021 (Mar-21)**: 313 GWh
  - MLR: 9 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **April 2021 (Apr-21)**: 341 GWh
  - MLR: 7 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **May 2021 (May-21)**: 356 GWh
  - MLR: 9 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **June 2021 (Jun-21)**: 373 GWh
  - MLR: 8 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **July 2021 (Jul-21)**: 418 GWh
  - MLR: 10 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **August 2021 (Aug-21)**: 403 GWh
  - MLR: 10 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **September 2021 (Sep-21)**: 418 GWh
  - MLR: 10 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **October 2021 (Oct-21)**: 418 GWh
  - MLR: 10 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **November 2021 (Nov-21)**: 418 GWh
  - MLR: 10 GWh
  - ILS: 114 GWh
  - IOS: 5 GWh
- **December 2021 (Dec-21)**: 166 GWh
  - MLR: 11 GWh
  - ILS: 114 GWh
  - IOS: 3 GWh

Annual DSR [GWh]

- **2021**: 1,936 GWh
  - MLR (loadshedding): 104 GWh (5%)
  - ILS: 57 GWh (3%)
  - IOS: 1,775 GWh (92%)

Notes: Demand Side Response (DSR) = Manual Load Reduction (MLR) + Interruptible Load Supply (ILS) + Interruption of Supply (IOS);
Sources: Eskom; CSIR analysis
Similarly actual manual load reduction (MLR) in 2021 was ~70% of announced levels of loadshedding
Agenda

1. Overview actual electricity production (2021)
2. Monthly electricity production (2021)
3. Weekly electricity production (2021)
4. Daily electricity production (2021)
5. Hourly electricity production (2021)
6. Actual load shedding (2021)
7. Other power system statistics
Eskom fleet performance for 2021 reveals annual EAF of 61.8% with planned maintenance of 10.8%, unplanned of 24.6% and other at 2.9%

NOTES: EAF - Energy Availability Factor; PCLF - Planned capability Loss Factor; UCLF – Unplanned Capability Loss Factor; OCLF – Other Capability Loss Factor
Sources: Eskom; CSIR Energy Centre analysis
Eskom fleet EAF for 2021 (hourly) exhibits similar seasonality as in other years.

**NOTES:**
- **EAF** - Energy Availability Factor
- **Sources:** Eskom; CSIR Energy Centre analysis

**2021: 61.8%**
Declining EAF trend continues into 2021 to an average EAF 61.8%
The weekly average EAF hit a new low of 53.3% in 2021

Notes: EAF - Energy Availability Factor. Average annual EAF is calculated as an average of the hourly EAF values.
Sources: Eskom; CSIR Energy Centre analysis
Unplanned outage component is increasingly trending in a worrying direction

- Shift from equal level of planned maintenance (PCLF) and unplanned outages (UCLF) in 2017 towards increasing distribution of UCLF as years progress
- Transition starts already in 2018 and progresses further
- 2020 was an unusual year with a bimodal distribution (twin peaks) of UCLF
- 2021 shows the distinct separation (in the statistical distribution) of UCLF and PCLF as unplanned maintenance continues to increase

NOTE: Data presented is hourly temporal resolution; Installed Eskom capacity is dynamic: [2017] 44.0-45.4 GW, [2018] 45.4-44.1 GW, [2019] 44.1-45.0, [2020] 45.0-45.6 GW, [2021] 45.6-46.4 GW
Thank you
