SECTION A – TECHNICAL INFORMATION

1 INTRODUCTION

The Council for Scientific and Industrial Research (CSIR) is one of the leading scientific research and technology development organisations in Africa. In partnership with national and international research and technology institutions, CSIR undertakes directed and multidisciplinary research and technology innovation that contributes to the improvement of the quality of life of South Africans. The CSIR's main site is in Pretoria while it is represented in other provinces of South Africa through regional offices.

2 INVITATION FOR PROPOSAL

Proposals are hereby invited for the provision of the development of detailed core, support and management operational processes and integrated business interrelationships mapping to support the planning and installation of enterprise process and resource planning or similar systems.

3 QUOTATION REQUIREMENTS

Experience with planning systems and system control touch points for effective material movement, materials handling and quality control etc. The implementation of this technology into a facility will assist with the realisation of an efficient production environment. There needs to be assessments on whether the company activities are organised and effective to prevent the implementation of incompatible technology. Resource planning systems promote the free flow of communication and sharing of knowledge across an organization, the integration of systems for improved productivity and efficiencies, and increased synergies across teams and departments. To ensure that moving to a resource planning software solution will not be counter productive, the company's culture needs to be adjusted with the change structure to ensure that the organization can support and maintain successful implementation.

The company's interdepartmental relationships and interactions need to be documented, analysed and optimised by a structured shop floor intervention. An effective documentation of the integral internal supplier and customer relationships and detailed input and output characteristics form a foundation for software implementation. This intervention is viewed as modular and conducted independently to that of the software implementation service provider. This will provide the

organisation with the opportunity to independently document the existing organisational activities and optimise the activities before implementation and integration of the selected software.
