In addition, the supplier must submit an answer to the following task:

Describe an experiment to conduct thermal signature analysis of the following scenario:

Background

Thermal imaging is a technique for measuring the temperature of an object based on the infrared signal radiated from the object. The applicant must plan and conduct an experiment to analyse a person wearing a polyester outfit (pants, shirt and a cap, all polyester material); positioned in a sub-Saharan environment. This person has a cell phone in his pocket, and he is engaged in a light activity (e.g., walking) which varies his body temperature over time. The experiment is to be conducted for day and night, under the clear sky, with no precipitation, no fog.

Task

Considering the above-mentioned scenario, the applicant must write a test plan, giving an overview of the planning and execution of such an analysis (Including calculations and/or simulations if applicable). Conduct the experiment and compile a test report (test report can be included in the test plan document).

Report contents must include:

Below are minimum requirements for contents of the report:

- List of equipment and tools used (including software packages if applicable)
- Camera specifications
- Test setup (including calculations if applicable)
- Detailed description of the terrain
- Provide a brief background study on polyester material
- Clearly define the thermal reference source (the blackbody)
- Test procedure
- Describe the measurements and data reduction and analysis technique used
- Recommendations (this could be future recommended research)

6 ELIMINATION CRITERIA

Proposals will be eliminated under the following conditions:

- Submission after the deadline
- Proposals submitted at incorrect location
- Companies listed on the National Treasury list of defaulters
- Companies listed on the National Treasury list of restricted suppliers
