SECTION A – TECHNICAL INFORMATION

1 INTRODUCTION

The Council for Scientific and Industrial Research (CSIR) is one of the leading scientific research and technology development organisations in Africa. In partnership with national and international research and technology institutions, CSIR undertakes directed and multidisciplinary research and technology innovation that contributes to the improvement of the quality of life of South Africans. The CSIR's main site is in Pretoria while it is represented in other provinces of South Africa through regional offices.

2 BACKGROUND

The Enterprise Creation for Development unit (ECD) of the CSIR is in the process of assessing the viability of commercially producing value added products from the roots of *Boscia albitrunca*, a tree species commonly known as shepherd's tree, or Motlopi in the targeted communities. The species is native to southern Africa, mainly in the North West, Free State and KwaZulu Natal provinces.

The project is located at two communities, namely Tseoge Village in the Dr Ruth Segomotsi Mompati and Tshidilamolomo Village in the Ngaka Modiri Molema district municipalities of the North West Province. The root is typically wildly harvested and processed at micro scale and sold mainly to local communities who consume it as hot beverage.

The intention is to eventually cultivate the tree commercially, should the project graduate to a commercially sustainable enterprise. However, to date there is no evidence that the tree has ever been commercially grown anywhere in the country.

Against this background, the services of suitably qualified service providers are sought to assist with trial production of seedlings, ready for propagation.

3 INVITATION FOR PROPOSAL

Proposals are hereby invited for suitable qualified service providers the supply of agricultural products and services to the CSIR.

4 PROPOSAL SPECIFICATION

Tenderers shall submit tenders in a format they deem fit. The project deliverables and outcomes will be as follows.

Services to be provided by the service provider will entail the following:

- Determining Motlopi seedling production method(s) and choosing the most suitable one(s);
- Actual production of seedlings that are ready for propagation, in a nursery environment, and supplied to the CSIR;
- Documenting and reporting of the above activities
- At least 330 healthy Motlopi seedlings ready for propagation
- A comprehensive report detailing processes followed in the trial cultivation of Motlopi seedling, but must also include:
 - Key findings and conclusions of the project
 - Recommendations regarding replication of the above i.e. Motlopi nursery establishment (soil, water and climatic conditions and shade) requirements; propagation requirements; and other relevant recommendations

The CSIR shall provide:

- Soil analysis results of the sites on which Motlopi is currently growing in the wild, and/or is expected to be propagated.
- Motlopi seeds, if required by the service providers.

The whole project, including the above mentioned activities, should be completed within six weeks period from the conclusion of the contract, and after the CSIR has delivered as indicated above.
