SECTION A – TECHNICAL INFORMATION

1 INTRODUCTION

The Council for Scientific and Industrial Research (CSIR) is one of the leading scientific research and technology development organisations in Africa. In partnership with national and international research and technology institutions, CSIR undertakes directed and multidisciplinary research and technology innovation that contributes to the improvement of the quality of life of South Africans. The CSIR's main site is in Pretoria while it is represented in other provinces of South Africa through regional offices.

2 BACKGROUND

The Light Metals (LM) unit of the Materials Science and Manufacturing (MSM) department of the CSIR is investigating the superplastic forming of titanium. This metal forming process is conducted at high temperature (greater than 900°C), and requires a controllable and safe gas supply system to form the sheet metal. Safety tests of the forming equipment, typically stainless steel pipes, have to be conducted before the forming experiments can be conducted. The safety tests are conducted from room temperature to the forming temperature and at a range of controllable pressures.

3 INVITATION FOR PROPOSAL

Proposals are hereby invited for the provision of service for the Design, Installation and Commissioning of an Argon Gas System to CSIR.

4 PROPOSAL SPECIFICATION

- An argon gas system is required for the testing of components, typically stainless steel pipes, under elevated temperatures and pressures at Building 15 of the Pretoria campus of the CSIR.
- The temperature range is from ambient to 930°C.
- The pressure range is from 1 bar to 80 bar under a specified pressure profile.
- The volume of the test component is typically be less than 0.1 litres.
- The proposal should indicate how safety will be maintained under these test conditions.
- The proposal should include automatic regulation of the gas pressure under computer control.

- The proposed system should include data acquisition of the line pressure, temperature of the test component and the temperature of the furnace.
- The system downstream of the test component must be specified with consideration given to the temperature of the gas.
- Delivery and installation within 2 months of receiving the order.
- Stipulate warranty and guarantee offers on workmanship and equipment.
- The proposals will be reviewed internally upon technical merit and the safety of the system.

5 FUNCTIONAL EVALUATION CRITERIA

The evaluation of the functional/technical detail of the proposal will be based on the following criteria:

	Criteria	Weighting
1	System technical proposal	45%
2	System safety	25%
3	Warranty and guarantee terms	15%
4	Track record	10%
5	Completion date	5%

5.1 Proposals with functionality / technical points of less than the pre-determined minimum overall percentage of 70% and less than 70% on any of the individual criteria will be eliminated from further evaluation.

5.2 Refer to **Annexure A** for the scoring sheet that will be used to evaluate functionality.

6 ELIMINATION CRITERIA
