Summary of 2014:

1.0% of system load supplied from wind & solar PV in South Africa

The South African Department of Energy is procuring new generation capacity and has already allocated a total of 8.1 GW of renewables (mainly wind and solar photovoltaic – PV) for procurement from Independent Power Producers (IPPs)

- ... of this, 6.3 GW have achieved preferred bidder status
- ... of this, 4.0 GW have financially closed and signed the Power Purchase Agreements with Eskom
- ... of this, ~560 MW of wind and 960 MW of solar PV were operational and fed energy into the grid end of 2014

In 2014, total wind and solar PV production was 2.2 TWh, supplying 1.0% of the South African system load

- Maximum daily total energy from solar PV and wind combined was 15.6 GWh (2.4%), which occurred on 15 Nov 2014
- Wind power achieved a maximum peak power production of 498 MW between 18h00-19h00 on 14 Dec 2014
- Solar PV power reached a maximum peak power of 894 MW between 12h00-13h00 on 24 Dec 2014
- Maximum instantaneous power contribution of wind and solar PV was 5.0% on 25 Dec 2014 between 14h00-15h00
- Maximum instantaneous power contribution of wind alone was 2.2% on 25 Dec 2014 between 17h00-18h00
- Maximum instantaneous power contribution of solar PV alone was 3.5% on 26 Dec 2014 between 12h00-13h00

Total monthly wind and solar PV production from Jan to Dec 2014 varied between 48 GWh and 343 GWh

- The monthly wind production from Jan to Dec 2014 varied between 26 and 147 GWh
- The monthly solar PV production from Jan to Dec 2014 varied between 23 and 213 GWh

From 1 November 2013 to 31 December 2014, 560 MW of wind and 960 MW of large-scale solar PV were commissioned in RSA

Notes: Load shedding assumed to have taken place for the full hours in which it was implemented, in reality load shedding (and the Stage) may occasionally change/end during a particular hour. Total GWh calculated assuming Stage 1 = 1 000 MW, Stage 2 = 2 000 MW, Stage 3 = 3 000 MW
