SECTION A – TECHNICAL INFORMATION

1 INTRODUCTION

The Council for Scientific and Industrial Research (CSIR) is one of the leading scientific research and technology development organisations in Africa. In partnership with national and international research and technology institutions, CSIR undertakes directed and multidisciplinary research and technology innovation that contributes to the improvement of the quality of life of South Africans. The CSIR's main site is in Pretoria while it is represented in other provinces of South Africa through regional offices.

2 BACKGROUND

The HySA&CCU group is in the process of acquiring a gas chromatograph (GC) to complement its ongoing work on biogas upgrading. The GC will be coupled to a pressure-swing adsorption unit where materials produced in-house will be tested for performance, separation and recovery of CH_4 and CO_2 . The GC should thus be able to analyse both upgraded biogas stream (CH_4) as well as the recovered CO_2 stream (of course and other gases). Future work will include the removal of carbon dioxide from flue gas emissions. Thus, the GC should be flexible enough to also measure trace gases present in both biogas as well as flue gas (e.g. H_2 , N_2 , NH_3 , CO , SO_x , NO_x etc), over and above the requirement of the two other main gases.

3 INVITATION FOR PROPOSAL

Proposals are hereby invited for the supply of a gas chromatograph for the measurement of high concentrations of methane and carbon dioxide, as well as other gases in the ppm ranges, to the CSIR's.
